

ABSTRACT OF THE DISCLOSURE

The present invention relates to a white coloring laser-marking thermoplastic resin composition, comprising:

(A) a rubber-reinforced thermoplastic resin;

(B) a methacrylic resin obtained by polymerizing from more than 90% by mass to 100% by mass of a methacrylic acid ester (b1) with from 0% by mass to less than 10% by mass of other vinyl-based monomer (b2) copolymerizable with the methacrylic acid ester;

(C) a maleimide-based (co)polymers excluding the component (B), an aromatic polycarbonate resin or mixture thereof; and

(D) a black-based substance,

said components (A), (B) and (C) being contained in amounts of 10 to 90% by mass, 9 to 65% by mass and 1 to 81% by mass, respectively, and the component (D) being contained in an amount of 0.01 to 5 parts by mass based on 100 parts by mass of (A)+(B)+(C).
